

The Bryce 24K offers the frequent mailer the opportunity to quickly, easily and professionally **print over 24,000 envelopes per hour** with Hewlett-Packard 600 dpi ink jet technology. Mail pieces as thick as 15mm can be accommodated. Postal barcodes can be automatically generated in the printer from the postal code in the address. **Graphic images** and barcodes can be printed anywhere on the mailpiece at print qualities of 150, 200, 300 or 600 dpi. The Bryce 24K has **twelve internal typefaces, which are scalable from 4 to 30 points** and can be combined with the internal attributes of bold, italic, outline and variable widths. These combine to create 11,040 different fonts for each character! No other company offers so many internal fonts. **The Bryce 24K is a PCL5 graphics printer** that can interface with any PC, mini, or mainframe. Windows 95/98 and NT drivers are included. The simple and unassuming design offers durability and reliability unparalleled in industrial mail processing industry, and **at a fraction of the cost of larger, more complicated ink jet addressing systems.**
